

CM-100DC

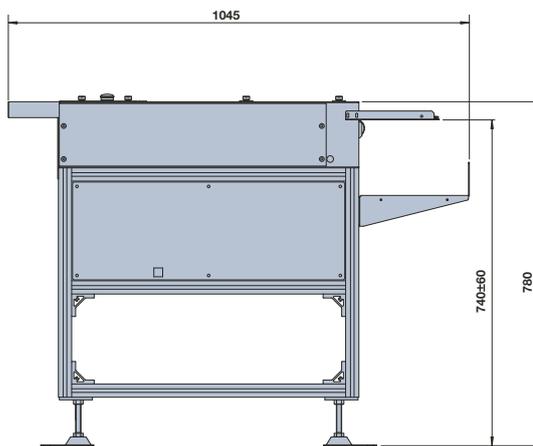

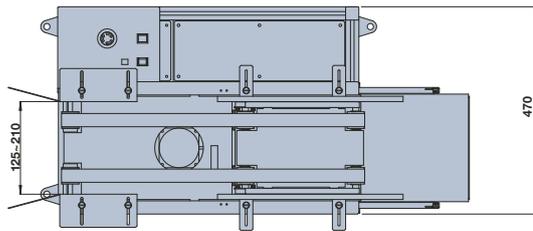

The Otari CM-100DC and CM-100DC-2 are designed to be placed near the end of a DVD packaging line. The machines are used to confirm that DVD discs are set in the closed cases supplied on the conveyor.

- The CM-100DC detects disc presence in the case and the CM-100DC-2 detects whether the case contains one disc only or not.
- Each case containing one disc is passed to the downstream conveyor and rejected cases are dropped from the machine.
- Various types of cases can be handled.
- Easy operation.
- No compressed air supply required.

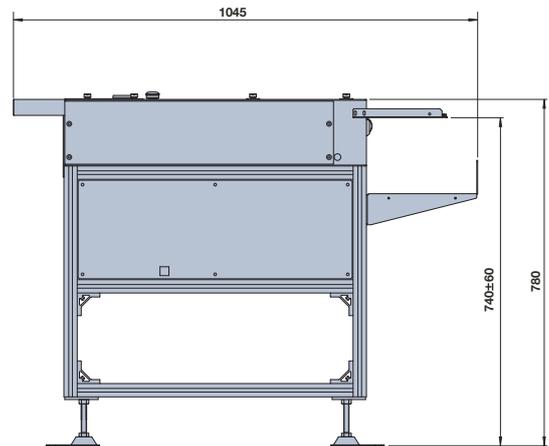

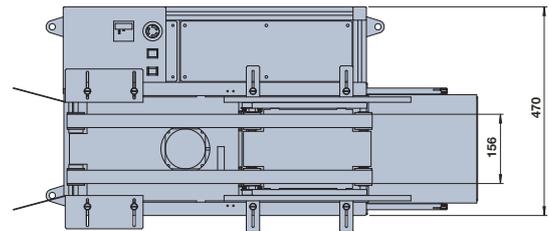

Specification

Supported Cases	Amaray tall cases, slim cases, Warner tall cases, half cases
Controls	POWER switch, EMERGENCY STOP switch, START button
Warning System	Beeps at power-up and in error status
Productivity	Max. 110 cases per minute
